VARGO® announces development of the PickerPal Fall Prevention Solution

COLUMBUS, Ohio—VARGO® Companies, a leading provider of integration, software and equipment solutions for major warehouse, fulfillment and distribution operations, is pleased to announce that it has designed PickerPal - a unique passive fall prevention device for exposed open pallet storage locations within pick modules.

The uniqueness of VARGO's PickerPal design is that it can be easily retrofitted into existing pick module storage rack systems and addresses the shortcomings customarily found in other solutions in the market place today. PickerPal does not require the fork truck operator or the picking personnel to actuate the device and does not substantially intrude into the pallet storage locations like other solutions in the market. PickerPal provides the added safety of passive fall protection while being self actuated and minimally impacting the pallet storage location. The ease of retrofitting and smart engineering keeps the cost of a PickerPal solution well below that of other competitive products.

For more information call 614-876-1163 or visit www.VARGOcompanies.com

Founded in 1971, VARGO® Companies is a team of leading warehousing, fulfillment and distribution operations specialists with expertise in system integration, innovative software solutions and specialized equipment. The company works with manufacturers, retailers, wholesale and direct-to-consumer distributors, to help them move beyond today's warehouse and distribution standards to achieve peak performance metrics. VARGO® is comprised of three strategic companies, VARGO® Integrated Systems Inc., VARGO® Adaptive Software LLC. And VARGO® Material Handling Inc. PickerPal is patent pending.
